

ACTIVATE THE SPACE

LED DISPLAYS

An LED wall is a system that requires multiple components working together. It starts with a series of LED Panels and a LED Mount System, The wall is then fed by a Digital Signage Software application loaded on a Media Player. An optional Video Processor can be added if you need more inputs for the wall such as Cameras, PC's or other Media Players as well as Scaling, Picture in Picture and Format Conversion. Lastly, these signals are sent to an LED Processor that communicates these video signals to the LED Panels.
Our expertise runs deep and wide beyond the LED walls and panels themselves. We are experts in CAD Mechanical Design. Experts in the Electronics, Media Players and Software that make these walls come to life and beyond all, we are Experts in Service and Support.
See more on LED Displays on our Website.
