IBOD AUTOMATIC BOX OPENER

Box Opening Device
of the IBOD

The Intelligent Box Opening Device (IBOD) is an in-line, pass-through box cutting machine, completely automating manual box cutting operations. Each IBOD has built-in intelligence, measuring the size of every incoming case in real-time to automatically find the correct cut lines. Boxes can be fed in pre-set size order or in mixed order without the need to run separate batches.

The IBOD is available in two variations: The IBOD Single, which cuts up to 550 cartons per hour, and the IBOD Duo, which can cut up to 950 cartons per hour. Standard cuts include; 3-sided top cut, 4-sided top cut, & tab cuts. Tape cuts are available as a non-standard. It is completely automatic, self-loading and self-aligning. The IBOD uses photo optic and linear displacement measurements to derive the dimensions of each box as it is automatically captured and positioned for cutting. Guide stops and a box snigger are used together to give the cutting robot a squared and stationary target. Once a box is ready to be cut, the IBOD uses software-controlled automation to cut boxes according to precise specifications defined by the customer.
