

VISPLAY

MONO 20 P/L

Mono is a versatile single point support system that lends unique structure to walls. It exists in two different-sized versions with varied load-bearing capacities.
Mono 20 P/L is the electrified version (24 V). Its round holder has an inner diameter of 20 mm and conceals a current output element. Once the holders have been installed in wall panels, diverse merchandise supports and fittings can be hooked into place at a slight angle: not just non-electrified elements but also shelves with integrated LED lighting. These merchandise supports are secured against twisting or unintentional removal with a catch. Shelves are automatically powered once inserted, optimally highlighting the merchandise below them! Thanks to the system's electrification (24 V), you can also integrate digital devices and elements in your display.
