

VISPLAY

MULTI-LANE

Multi-Lane is a ceiling rail system, designed specifically for use directly below the room ceiling. It consists of aluminium profiles. The basic elements are rails that can be mounted on the ceiling in the layout of your choice. There are three levels available on each rail for simultaneous use of different elements: for example merchandise supports or ceiling lights. Panels can also be fitted in the empty spaces between rails – to simulate more home-like situations or to hide installations.
This system is optionally available in an electrified version. In this case standard electrical rails are integrated in the profiles, eliminating the need for raised floors or floor boxes. Powered merchandise supports (24 V) and ceiling lighting (230 V) can be used together in the system. Digital devices, such as cameras or screens, can also be attached to the system and automatically powered.
