

VISPLAY

OMNIO P/L

Omnio P/L is an electrified shelving and structural system. It consists of round metal tubes, which can be coated in a choice of colours. The system is extremely flexible: it can be used as free-standing mid-floor structures or partitions, and as wall units. The round vertical uprights and shelf frames can be combined in any configuration and extended in all four directions.
The system is also optionally available in an electrified version – with power rails integrated in the frame and therefore concealed. When shelf frames are inserted in the electrified uprights, merchandise supports with LED lighting are automatically powered. It is additionally possible to connect digital devices and elements to the 24 V electrification. You can also connect LED spotlights to the uprights.
